DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

Invention I. Claims 20-27, drawn to measuring or testing of receiver, classified in class 455, subclass 226.1

Invention II. Claims 28-30, drawn to antenna with parasitic element, classified in class 343, subclass 817.

Invention III. Claims 31-33, drawn to measuring, testing, or monitoring of transmitter, classified in class 455, subclass 115.1.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I, II, and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as adding a probe signal to each of receive signals received by said plurality of antenna elements; Invention II has separate utility such as auxiliary antenna elements, each of which is in weak conjunction with a part of a radiating element constituting each antenna element; Invention III has separate utility such as a transmitting signal generating unit which generates transmitted signals, and calibrates a phase of each antenna transmitted signals. See MPEP § 806.05(d).
3. A telephone call was made to Sofer & Haroun, LLP on 01/04/2005 to request an oral election to the above restriction requirement, but did not result in an election being made.

Art Unit: 2681

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined (37 CFR 1.143).
